</table>

Introduction
Tannerella forsythia is an anaerobic, gram negative species of bacteria of the Cytophaga-Bacteroidetes family implicated in periodontal diseases. T. forsythia, sometimes referred to by previous names (including Bacteroides forsythus and Tannerella forsythensis), is a member of the red complex of periodontal pathogens.

Immunogen
Tannerella Forsythia Strain FDC 331 (OMZ 348)

Immunological Donor
female balb/c mouse spleen

Myeloma
Mouse F0

Fusion Species
Mouse X Mouse Hybridoma

Mycoplasma
Mycoplasma Status: Negative (MycoAlert Kit)

ANTIBODY INFORMATION

Reactivity
Tannerella forsythia

Isotype
IgG2b

Target
Tannerella forsythia

Application
Cell binding; Immunoblotting;

SAFETY AND PACKAGING

Storage
liquid nitrogen

Safety Considerations
The following safety precautions should be observed.
1. Use pipette aids to prevent ingestion and keep aerosols down to a minimum.
2. No eating, drinking or smoking while handling the hybridoma.
3. Wash hands after handling the hybridoma and before leaving the lab.
4. Decontaminate work surface with disinfectant or 70% ethanol before and after working with hybridoma.
5. All waste should be considered hazardous.
6. Dispose of all liquid waste after each experiment and treat with bleach.

Ship
Dry Ice
